

Evenup...Makes a 11 the difference

The Evenup is a new and innovative device that helps equalize patient's limb length and reduces body strain while walking in a cast or a fracture boot. The Evenup is a easily removable and convenient fix for the frequent complaints about hip, knee, and back pain.

Let Evenup help you

The Evenup is easy and simple to apply and use. Patients that have walked only a short time without the Evenup with a shorter limb will immediately notice the improvement in their balance and gait. However, they should continue to walk slowly and not run while using the Evenup

Layers

The Evenup comes in three sizes and two thicknesses. A shoe size evaluation utilizing the chart on the back of the package and a trial fitting are both necessary to ensure that the appropriate Evenup is chosen for each patient.

Single Layer

Double Layer

The Evenup allows patients to live their lives just the way as they would before the accident to their foot. The Evenup is great for doing everyday actions such as walking the dog, or going to the mailbox. Walking with a fracture boot has never been easier.
